                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence defines EST HHFPQ25R obtained from a human foetal heart library. It shows high homology to EST HOEDHIIR (see AAV38293) obtained from a human osteoblast library. The two ESTS are probably from a similar transcript. The chemokine motifs of the two ESTS were compared, and a consensus sequence was derived and subsequently confirmed as encoding human DNAX Vic-1 (DVic-1) (see AAW60649), a novel C-C chemokine. CDNA (see AAV38291) encoding DVic-1 blararies. DVic-1 plays a role in the regulation or development of libraries. DVic-1 plays a role in the regulation or development of neuronal or haematopoietic cells, e.g. lymphoid cells, which affect immunological responses. It can be used in the treatment of conditions associated with abnormal physiology or development,

                                                                                                                                                                   preferentially expressed in preast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antibody that recognizes the novel chemokine, or a chemokine-derived antigenic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antigenic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign eystitis, and benign hyperplasias as well as other malignancies. The present sequence represents an antisense riboprobe that hybridises to

DVic-1; DNAX Vic-1; C-C chemokine; cytokine; human; immune system;

```
This sequence defines EST HOEDHIIR obtained from a human osteoblast
library. It shows high homology to EST HHFFQ25R (see AAV38292)
cobtained from a human foctal heart library. The two ESTS are
probably from a similar transcript. The chemokine motifs of the
two ESTS were compared, and a consensus sequence was derived and
subsequently confirmed as encoding human DNAX Vic-1 (DVic-1) (see
AAW60649), a novel C-C chemokine. CDNA (see AAV38291) encoding DVic-1
can be obtained from e.g. skin, epithelial or wound healing
libraries. DVic-1 plays a role in the regulation or development of
neuronal or haematopoietic cells, e.g. lymphoid cells, which affect
immunological responses. It can be used in the treatment of
conditions associated with abnormal physiology or development,
including abnormal proliferation, e.g. cancerous conditions or
degenerative conditions. Abnormal proliferation, regeneration,
degeneration, and atrophy may be modulated by appropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             201 cctcagaagccatacttcccattgcctccagctgttgcacggaggtttcacatcatattt 260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a breast specific gene (BSG) clone. The BSG sequences are also referred to as breast specific markers (BSM). The invention relates to methods for diagnosting, monitoring, staging, langing and treating breast cancer (BC). The methods comprise measuring the levels of BSG products in cells, tissues or body fluids of the patient and comparing the measured levels of BSG, with BSG levels of a normal human control. An antibody against the BSG sequences can be labelled and used for imaging BC in a patient. The antibody can be conjugated to a cytotoxic agent, and used for treating BC in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting, diagnosing, monitoring, staging, prognosticating, imaging and treating breast cancer using protein product of breast specific genes -

Amodified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_Kid3 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 13223/6-1323911, 1456007-1456775, and 150552-1502855). Subtraction by Bento Soares and M. Fatima Bonaldo. "

Pools of cells were isolated from a GenomeScreen(TM) library. The
library of cells was generated by retroviral integration of a gene
tagging element consisting of: 1) A promoterless beta-lactamase
proceeded by a splice acceptor as a reporter for gene expression;
2) A promoter driving neomycin resistance followed by a splice
donor to trap downstream exons. 3' RACE from neomycin gene was
performed using total RNA from isolated pools. Output was shotgun
cloned in pamp'l and used to transform DHS-alpha competent
bacteria. 5' ends of reported sequences were immediately preceded
by splice donor from the trapping construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RNA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                        2017
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 11,

* NOTE: This is a 'working draft' sequence. It currently
* consists of 9 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   * NOTE: This record contains 76 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center code: WIBR

If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:338-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.
                                                                                                                                                                                                Submitted (08-AUG-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 146376)

It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will.

* NOTE: This is a "working draft' sequence. It currently
* consists of 11 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is belleved to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be preserved.
* the accession number will be preserved.
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 11718 34238: contig of 11717 bp in length
* 48385 48384: gap of unknown length
* 48385 880643: contig of 13259 bp in length

NOTE: This is a 'working draft' sequence. It currently consists of 34 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
